

macOS High Sierra LodgeMaster Compatibility

On September 25, 2017 Apple released macOS High Sierra (macOS 10.13) it's latest version of their Mac operating system. The LodgeMaster team was made aware of an issue exporting data from LodgeMaster earlier this week and began investigating the issue. The LodgeMaster team has confirmed an issue with Silverlight and the new macOS 10.13 operating system. LodgeMaster users who update to the latest version of macOS will no longer be able to export data from LodgeMaster using Safari. The Silverlight issues only impacts the Apple Safari browser. Mac users who have updated to 10.13 can download Firefox ESR 52.40 and continue to use LodgeMaster. LodgeMaster users who have not updated to 10.13 are encourage not to update if they want to continue to use Safari. Mac users can download Firefox ESR 52 [here](#).

The LodgeMaster team is actively working on the next version of LodgeMaster, LodgeMaster 4. LodgeMaster 4 is built on new technology and does not use Silverlight. The LodgeMaster team is working to finish development of the last module and begin the beta testing process very soon. Stay tuned for more information on LodgeMaster 4 in our next development update.

Yours in Brotherhood,
The OA LodgeMaster Team
